PG-SERIES 27 Plasma Extension Gun

Adaptable for use with all Bay State Plasma Systems

The PG-Series 27 Extension Gun can apply coatings to IDs as small as 1.5 inches.

The PG-Series 27 Plasma Spray Extension Gun is a versatile production gun designed for internal diameter coating applications.

The PG-Series 27 gun operates up to 30 kW in power in the subsonic mode and is available in two spray angle hardware configurations: 45° and straight-ahead.

The PG-Series 27 Extension Gun offers two spray angle hardware options: 45° and straight-ahead. It can deposit coatings into diameters as small as 1.5 in. (38 mm) and is available in two standard lengths, 12 in. (305 mm) and 24 in. (610 mm).

Series 27 features:

- Applies coatings to ID's as small as 1.5 inches
- Self-aligning components
- Two spray angles, 45° and straight-ahead
- Available in almost any length up to 72 inches
- Built-in air jet for part cooling
